S1855-1-K

# GEORGIA AGRICULTURAL FACTS

Georgia Agricultural Statistics Service
1987 Edition

*Peaches have long been a Georgia trademark. The state was among the first to become involved with commercial peaches, and the development of the Alberta variety by the Rumph family in Macon County led to the expansion of the peach industry. Although Georgia no longer leads the nation in peach production, peaches remain an important part of Georgia agriculture. (Photo courtesy Georgia Agricultural Commodity Commission for Peaches).*

# MESSAGE FROM THE COMMISSIONER

Dear Fellow Georgians:

Each year, as more people become aware of the importance of agriculture, Georgia Agricultural Facts becomes a more valuable resource for anyone interested in crop and livestock production patterns. Such individuals would include farmers and other agribusiness professionals, economists, journalists, students, public officials and decision makers from the private sector.

1986 will surely be remembered as the year of the worst drought in recorded history, which along with scorching heat throughout the planting and growing season, caused devastating damage to yields and crop quality for many important Georgia commodities. Some crops prospered in spite of the drought, and there were bright spots in the overall picture as 1986 came to a close.

A haylift, organized in response to the drought, focused the Nation's attention on the plight of Georgia farmers. Thanks to the generosity of people around the country and the cooperation of state and private organizations, over 10,000 tons of donated hay was distributed to the State's struggling livestock and dairy producers.

This publication, produced under a cooperative agreement with the National Agricultural Statistics Service, U.S. Department of Agriculture, and published by the Georgia Department of Agriculture, is dedicated to Georgia farmers, who sustain us with their labors and inspire us with their perseverance.

Sincerely,

Tommy Irvin

# FOREWORD

The Georgia Agricultural Statistics Service as a part of USDA and the Georgia Department of Agriculture has the responsibility to continually measure the level of Georgia's production agriculture, and to maintain production and inventory records. This is a responsibility that is not taken lightly. Every effort, within resource and regulatory limitations, is expended to collect, summarize, analyze, and publish timely and reliable statistical facts covering Georgia's production agriculture.

This publication is a summary of 1986's agricultural production in Georgia. It was a difficult year for this office, but a far more difficult year for many of the producers and agri-service firms in our State. A record setting drought, low prices for many commodities, and surplus supplies nationally and globally contributed to widespread financial hardships. Many tough decisions were made during the year by producers that will affect the State's agriculture for many years. Some of these decisions will undoubtedly develop trends that will create a different but, hopefully, an even stronger agricultural base.

Our entire staff would like to express our appreciation to the thousands of Georgia farmers and agri-businesses that voluntarily report by mail, telephone, or personal interviews on the numerous surveys that were conducted during the year. Without this voluntary cooperation it would be impossible to make reliable estimates or compile this publication. Thanks to each of you for your continued cooperation and support.

We are also indebted to personnel in the Extension Service, State Universities, the State Department of Agriculture, and other USDA agencies for their continued cooperation. They help us keep abreast of ever changing conditions, analyze data, prepare reports, and disseminate information to data users throughout the State.

As you review and use this report, please feel free to suggest any changes that will improve its future usefulness.

Sincerely,

Larry E Snipes

Larry E. Snipes
State Statistician

# CROPS

## CROP HIGHLIGHTS

The most apt one word definition for the 1986 crop year would be "down". Acreages for most crops were down from the previous year. Rainfall was definitely down with a record-long drought stretching from late 1985 through the winter, spring, and summer of 1986. As a result, yields were down sharply from those of the previous year for most crops. One thing that was up significantly was abandonment. Yield prospects dropped so low on some parched acres that no attempt was made to salvage them. The extended drought also lowered pasture conditions to the point that grazing was almost non existent. Hay supplies were quickly exhausted and emergency shipments from other parts of the Country were obtained to partially meet feed needs.

Above normal temperatures and the absence of rainfall early in 1986 allowed rapid land preparation and early planting of spring planted crops. Despite the rapid progress early in the planting season, progress soon dropped back to normal levels and then below normal as soils became too dry to risk the seed. Plantings often showed poor germination and slow growth due to moisture shortages. Farmers fortunate enough to have irrigation equipment often had to irrigate just to get seed to sprout, and then frequently to maintain growth. Those totally dependent on surface irrigation water ran short as streams and lakes dried up. Even farmers with deep wells saw profits evaporate as expenses escalated.

Except for some brief and spotty relief, the extremely dry conditions continued into late summer. Record high summer temperatures also contributed to the generally weak condition of the State's crops. When general rain finally returned to the State in early September, it was too late for much improvement in crops except for some late sorghum and hay crops and for dryland peanuts, which had been almost dormant during the drought. Even those crops could not recover to what might be considered normal.

Considering the severity of the stress that Georgia's crops were under during 1986, it is a tribute to the skills and extra efforts of Georgia's farmers that yields were not worse. Late fall rains and above normal temperatures brought harvest woes to farmers who hadn't harvested their cotton and soybeans by mid-November. Beginning in mid-November warm and humid conditions along with frequent showers and sometimes heavy rains forced farmers to sharply reduce harvest operations. Crop looses and quality deterioration caused further abandonment and some cotton and soybeans were not harvested until the late winter when fields finally dried enough to support machinery.

## PEANUTS DOWN 15 PERCENT

Peanut acreage was the exception to the rule in 1986. With most other crops showing acreage cut backs, peanut growers expanded their plantings by 12 percent to 665,000 acres, the largest peanut acreage for the State since 1950. Even with that much expansion in acreage, Georgia's peanut crop shrank 15 percent from the previous year to 1.63 billion pounds, due to the drought. The average yield fell 785 pounds, or 24 percent, to 2,455 pounds per acre. It was the lowest yield since the 1980 drought-reduced yield of 1,935 pounds. When the September rains came, the dryland peanuts were in a very weak condition and most knowledgeable observers thought it too late in the season for substantial recovery. The lowly peanut plant proved itself very resilient and with improved moisture and summer like temperatures during September and October made a come back that surprised even the experts. Average price for the 1986 crop was 30.0 cents per pound, up 5.4 cents per pound from 1985's average. The total value of the 1986 crop was $490 million, up 4 percent from the 1985 value. Peanuts accounted for 47 percent of the value of all Georgia crops in 1986.

## CORN HARVESTED ACRES RECORD LOW

Georgia's corn plantings were reduced 17 percent to 900,000 acres in 1986, making it the second smallest corn acreage ever planted in Georgia. The record drought lowered the acres harvested for grain even further to 25 percent below 1985 and making the 730,000 acres harvested for grain the smallest acreage harvested since records began in 1866. The average yield was 58 bushels per acre, off 26 bushels, or 31 percent from the previous year. Even some of the irrigated corn had reduced yields due to the abnormally high temperatures during the critical pollination stage. Production for 1986, at 42.3 million bushels, was down 48 percent from the previous year, and the smallest crop since 1977. Average price, at $1.90 per bushel, was 49 cents below the 1985 price. The value of the corn crop utilized for grain fell 59 percent to $80.4 million, slightly less than 8 percent of the total value for all crops.

## HAY ACREAGE UP 7 PERCENT

As the drought restricted growth of both pastures and hay crops, Georgia's farmers turned to additional acres and other vegetation that they would not have cut if more normal conditions had existed. As a result, the acreage harvested for hay rose 7 percent to total 530,000 acres. Despite the extra acreage, production fell 27 percent to 901,000 tons, as the average yield fell 32 percent, or .8 ton, to only 1.7 tons per acre, the lowest since 1980, another dry year. As the need for feed increased, so did the average price, to a record-high $75 per ton, up $15 a ton from 1985. Even with record prices, the overall value of Georgia's hay crop fell 9 percent to $67.6 million. Value of hay production added 6.5 percent to the total value of all crops, compared with 5.5 percent in 1985.

## COTTON PRODUCTION HALVED

Cotton production in Georgia in 1986, at 185,000 bales, was only one-half of the 1985 output. Contributing to the sharp reduction was a 20 percent decline in acres harvested to 195,000 acres. More important was a 37 percent drop in yield which cut 270 pounds per acre from the previous year's yield. The 1986 yield was 455 pounds per acre. Both the acreage reduction and the yield loss were drought related. The average price for cotton was also weaker in 1986, losing 2.7 cents per pound to average 52.1 cents per pound, the third consecutive year of falling cotton prices. Value of the cotton crop fell 52 percent to only $52.0 million. Cotton accounted for 5 percent of the total value of all crops, compared with about 8 percent the previous year.

## SOYBEAN PRODUCTION DROPS 59 PERCENT

Georgia acres planted to soybeans in 1986, at 1,250,000, were down 31 percent. As a result of the ravaging drought and unfavorable late fall weather, acres left for harvest for beans totaled only 850,000 for the smallest harvested acreage since 1972. Average yield on those reduced acres was also affected negatively, dropping 6 bushels per acre from the previous year to only 18 bushels per acre. Even achieving that light yield under all the adverse conditions was considered something of a major accomplishment. The combination of falling acres and yield and increased abandonment pulled the total soybean production down 59 percent to only 15.3 million bushels, the smallest crop since 1972, and the fourth consecutive year of declining soybean production. The average price received for Georgia soybeans was also down, by 7 cents per bushel, to $4.75. The overall value of the 1986 crop amounted to $72.7 million, also down 59 percent. Soybeans contributed only 7 percent of the total value of all crops in 1986, compared with 13 percent in 1985.

## TOBACCO PRODUCTION OFF 17 PERCENT

Georgia's tobacco acreage declined for the fifth consecutive year in 1986, shrinking 14 percent to 31,000 acres. This was the smallest tobacco acreage for the State since 1932. Yield was also down, dropping 90 pounds from the previous year's yield to average 2,190 pounds per acre. Tobacco poundage was down 17 percent to 67.9 million pounds, the smallest crop since 1943. The average price, at $158.10 per hundredweight, was off $13 and the lowest price since the 1980 crop. The value of tobacco production was off 24 percent in 1986, falling to $107 million, the lowest value since 1973. Tobacco accounted for a little over 10 percent of the total value of all crops, about the same as in 1985.

## FIELD CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE OF PRODUCTION, GEORGIA, 1979-1986

| Year | Acres Planted | Acres Harvested | Yield per Acre | Production | Marketing Year Average Price per Unit 1/ | Value of Production |
|---|---|---|---|---|---|---|
| | - - 1,000 Acres - - | | Bushels | 1,000 Bushels | Dollars per Bu. | 1,000 Dollars |

1/ Reference date has been changed from January 1 to December 1 beginning December 1, 1986.

# FRUITS AND NUTS

## HIGHLIGHTS

Georgia's 1986 fruit and nut crops were damaged by winter low temperatures and particularly the March 21-23 freeze. Fortunately the freeze was limited to localized areas in north and central Georgia and the extent of damage was nowhere near that of 1985. Hot, dry weather during the spring and summer caused problems with fruit and nut sizing. Harvest progress of peaches was in line with last year, but well ahead of the five year average. Apple harvest was in step with 1985 and the five year average. Pecan harvest kept pace with the five year average until early December when unfavorable weather caused progress to slow. Pecan harvest in 1986 started slower than in 1985 and trailed the entire season. A further slow down occurred when late fall rains came, causing much concern whether the remaining nuts would be harvested. The fruit and nut values were the highest or near the highest on record.

## APPLE PRODUCTION AND VALUE SOAR

Georgia's utilized apple production increased 53 percent to 29 million pounds, compared to 1985's 19 million pounds. Only about 9 percent of the apples were blooming at the time of the March 21-23 freeze and thus escaped most of the freeze damage. Drought during the spring and summer reduced the size of non irrigated apples and cut production. The 1986 utilized production was the fifth highest on record and 16 million pounds below 1984's record high of 45 million pounds.

The average price for Georgia's 1986 apples was a record high 16.0 cents per pound, compared with 11.2 cents in 1985 and 8.4 cents in 1984. The overall value of utilized production of $4.65 million soared 118 percent above 1985's $2.13 million and 24 percent above 1984's $3.76 million to set a record high value of production.

## GRAPE PRODUCTION DOWN

Georgia's grape production in 1986, at 2,000 tons, fell 5 percent from 1985's 2,100 tons. The decrease was due partly to freeze damage, but mainly to the record hot, dry weather conditions over an extended period of time. An increase in new French varieties coming into production kept the production from falling even more. The average price received for all grapes (both fresh and processed) was $792 per ton, an increase of $298 over 1985 and $210 per ton over the previous record high of $582 recorded in 1984. The higher price per ton pushed the value of production to $1.58 million, 53 percent above 1985. It was the third largest value recorded.

Exported grape production is expected to continue in Georgia, especially the new French varieties for wine production.

## PECAN CROP UP 45 PERCENT

Georgia's 1986 utilized pecan crop of 120 million pounds was 37 million pounds more than the 1985 crop. Despite the drought, the 1986 crop tied 1981 and 1984 for the fourth largest crop on record. The final 1986 estimate was up considerably from the September and October estimates and even better than what was expected in December. The higher final estimate was mainly due to more nuts in the crown of the trees than expected.

In 1986, pecans were very small in many non irrigated groves due to the drought. The rainy and damp weather of late August and early September caused above normal nut droppage. Later on in September the record hot, dry weather returned until about mid-October. By December 1st, with 61 percent of the nuts harvested, the pecan estimate was raised to 95 million pounds. However, there was much concern at this time if the remaining nuts would be harvested due to the rainy weather. Most pecans were eventually harvested. Georgia produced 44 percent of the 1986 national output compared with 34 percent of the 1985 national output.

The average price received by Georgia growers for their 1986 pecan crop was 68.2 cents per pound, down 2 cents per pound from 1985. This was the fourth highest price on record. It was surpassed by 1980's average price of 78.4 cents per pound, 1976's record high 81.5 cents per pound, and last year's slightly higher 68.4 cents per pound. The value of the pecan crop totaled $81.8 million, up 44 percent from 1985 and 23 percent above the 1984 value. This was the second highest value on record, surpassed only by 1980's $82.3 million.

## PEACH CROP UP 22 PERCENT, PRICE DOWN

Georgia's utilized (sold or used) peach production of 101 million pounds was up 22 percent from 1985's 83 million pounds. The 1986 crop was nipped by winter cold and the March 21-23 freeze, especially for certain varieties in localized areas in north and central Georgia. About 78 percent of the peaches were in bloom at the time of the freeze. Freeze damage to peaches was not nearly as heavy as in 1985. The severe spring and summer 1986 drought also caused Georgia's peach prospects to decline from the initial estimate on June 1.

However, the U.S. supply of peaches for fresh market was up from the previous year and an adequate supply was available. This lowered the average price per pound for Georgia peaches to 19.7 cents, 20 percent below 1985's 24.6 cents. The increase in utilized production did not offset the decrease in price per pound. This put the 1986 value of production at $19.9 million, 3 percent below 1985's $20.4 million but still the fourth highest on record.

## FRUIT AND NUT CROPS, UTILIZED PRODUCTION AND VALUE, GEORGIA, 1981-1986

# POULTRY

**1986 FARM VALUE OF POULTRY AND EGGS**
$1,259,700,000

**Second in Poultry Value of Production**
**Second in Broiler Production**
**Third in Egg Value of Production**
**Fourth in Egg Production**

## SUMMARY

The total farm value of poultry and eggs produced in Georgia amounted to $1.26 billion for the 1986 production year, up 16 percent from 1985. Value of production from broilers totaled $951.9 million, up 20 percent from 1985. The record high value resulted from both a record high number produced and a record high price per pound. The value of production for all eggs was $263.4 million, up 12 percent from 1985. The value of production for turkeys declined 9 percent to $31.9 million in 1986.

## BROILER PRODUCTION

Georgia broiler producers produced 697.4 million broilers in 1986, the fourth consecutive year of record high numbers. Production increased 3 percent from the 677.2 million broilers produced in 1985. Pounds produced in 1986 totaled 2.93 billion, a 3 percent increase from 1985's 2.84 billion pounds. The average price received from broilers in 1986 at 32.5 cents per pound set a new record high. This is 4.5 cents higher than last year and 0.5 cents higher than the old record high set in 1984. Georgia ranked second to Arkansas in the number of broilers produced and accounted for 14 percent of the nation's total broiler production.

## TURKEY PRODUCTION

Turkeys produced in Georgia during 1986 totaled 2.43 million birds, down 8 percent from the 1985 production of 2.63 million. Pounds of turkey produced in 1986, totaled 67.9 million, compared with 74.7 million pounds produced in 1985. This was a 9 percent decrease from the 1985 poundage. Only heavy breed turkeys are produced in Georgia. The average price received per pound was unchanged from 1985 and averaged 47.0 cents.

## EGG PRODUCTION

Eggs produced in Georgia for the year ending November 30, 1986, totaled 4.32 billion, 1 percent more than the 4.28 billion eggs in 1985 but 3 percent less than the 4.47 billion eggs in 1984. The number of layers averaged 17.7 million in 1986, 1 percent more than the 17.6 million layers the previous year. In hatching egg flocks, the average number of layers was up in 1986 to 5.5 million from 5.3 million in 1985. The average number of layers in table egg flocks dropped for the seventh consecutive year falling from 12.3 million in 1985 to 12.2 million in 1986. All layers in Georgia produced an average 243 eggs per hen in 1986, the same as in 1985. Hatching egg flocks produced 1.23 billion eggs during 1986, an increase of 3 percent from the previous year. Table egg flocks produced 3.09 billion eggs in 1986, slightly less than 1985. The average price for all eggs in 1986 was 73.2 cents per dozen, 7.2 cents per dozen more than 1985. Table egg prices averaged 51.1 cents per dozen, up 3.4 cents from the previous year. Hatching egg prices averaged 134.0 cents per dozen, up 14.0 cents per dozen from 1985. Georgia's total egg production was 71 percent table eggs and 29 percent hatching eggs. Georgia ranked fourth in the nation in 1986 in both the average number of layers and in total egg production. California was the leading state in layers and egg production, followed by Indiana and Pennsylvania. Georgia ranked third in value of eggs produced behind California and Indiana in 1986.

# LIVESTOCK AND DAIRY

## LIVESTOCK AND DAIRY HIGHLIGHTS

Georgia's livestock inventory at the end of 1986, was below the previous year for both cattle and hogs. Cattle numbers, on January 1, 1987, dropped for the second straight year to 1,650,000 head. Hogs, on December 1, 1986, decreased to 1,100,000 head, marking the seventh consecutive year of declining numbers. With the drop in 1986 inventory, hog prices did improve. All hogs averaged $50.50 per cwt. during the 1986 marketing year, $5.80 per cwt. more than 1985. Cattle prices, however, continued to fall, as beef cattle averaged $40.60 per cwt. compared with $43.50 in 1985.

Georgia ranked 24th Nationally in the number of cattle and calves on January 1, 1987, and 13th in the number of hogs and pigs on December 1, 1986. The number of cattle operations in Georgia in 1986 totaled 35,000, 3 percent less than 1985 and the lowest of record back to 1965. Hog operations numbered 9,000 in 1986, compared with 11,000 in 1985. Hog operations were also at a record low.

Milk produced in Georgia in 1986 totaled 1.26 billion pounds, 3 percent less than the 1.30 billion pounds produced in 1985. Most of the decline was attributed to the "Whole Herd Buy-out Program" which began in April 1986. Georgia ranked 27th in the Nation in pounds of milk produced. The number of operations with milk cows in 1986 totaled 1,700, a decline of 500 from 1985. This was a record low number of milk cow operations.

Cash receipts for dairy and livestock producers amounted to $584.5 million in 1986, 3 percent less than the previous year.

## CATTLE

All cattle and calves on Georgia farms on January 1, 1987, totaled 1,650,000 head, 3 percent less than the previous year's total of 1,700,000 head. The number of beef cows increased 1 percent to 760,000 head but milk cows dropped 16 percent to 100,000 head. Cash receipts from the sale of cattle and calves in 1986 dropped 4 percent to $215.4 million. The average price for cattle was down 7 percent to $40.60 per cwt., and calves averaged $54.50 per cwt., 3 percent less than 1985.

The value of the inventory on January 1, 1987, for all cattle and calves totaled $528 million, up 4 percent from a year earlier. Average value per head was $320, compared with $300 on January 1, 1986. This was the first increase in value in three years.

The 1986 calf crop totaled 780,000 head, the same as the previous three years. Morgan county maintained the lead in number of cattle and calves with 34,000 head on January 1, 1987. Mitchell county followed with 31,000 head and Colquitt county was third with 30,000 head.

## HOGS

There were 1,100,000 hogs and pigs on Georgia farms on December 1, 1986, down 4 percent from the previous year. Breeding inventory decreased 6 percent to 155,000 head. Hog cash receipts of $195.4 million for 1986 were down slightly from the $196.4 million for 1985. The average value of hogs and pigs on hand December 1, 1986, was $84.50 per head, up $21.50 from the preceding year. The total value of Georgia's hog inventory on December 1, 1986, was $93.0 million compared with $72.5 million a year earlier.

Georgia pork producers had 220,000 sows to farrow from December 1, 1985, through November 30, 1986. This was down 15 percent from the 259,000 sows farrowing during the same 12 months a year earlier. The average number of pigs saved per litter in 1986 was 7.53, resulting in a pig crop of 1.66 million. This was down 12 percent from the previous year's pig crop. Colquitt county led all other counties in the number of hogs and pigs on farms with 55,000 head followed by Brooks county with 45,000 head.

HOGS

There were 1,100,000 hogs and pigs on Georgia farms on December 1, 1986, down 4 percent from the previous year. Breeding inventory decreased 6 percent to 155,000 head. Hog cash receipts of $195.4 million for 1986 were down slightly from the $196.4 million for 1985. The average value of hogs and pigs on hand December 1, 1986, was $84.50 per head, up $21.50 from the preceding year. The total value of Georgia's hog inventory on December 1, 1986, was $93.0 million compared with $72.5 million a year earlier.

Georgia pork producers had 220,000 sows to farrow from December 1, 1985, through November 30, 1986. This was down 15 percent from the 259,000 sows farrowing during the same 12 months a year earlier. The average number of pigs saved per litter in 1986 was 7.53, resulting in a pig crop of 1.66 million. This was down 12 percent from the previous year's pig crop. Colquitt county led all other counties in the number of hogs and pigs on farms with 55,000 head followed by Brooks county with 45,000 head.

## MILK PRODUCTION

Georgia's 1986 milk production was down 3 percent to 1.26 billion pounds, and the average number of milk cows dropped 7 percent to 109,000 head. The annual average production per cow, at 11,560 pounds, increased 4 percent from 1985. Cash receipts from marketings totaled $173.8 million in 1986, 4 percent less than the previous year. Milk prices averaged $13.90 per cwt. in 1986 compared with $14.10 per cwt. in 1985. Morgan county was the leading county in the number of milk cows on January 1, 1987, with 9,000 head followed by Putnam county with 8,400.

## RED MEAT PRODUCTION

Slaughter plants in Georgia processed 437.9 million pounds of red meat (beef, veal, pork, and mutton) during 1986, an increase of 16 percent from 1985.

The number of hogs slaughtered in Georgia in 1986 totaled 1.85 million head, 18 percent more than in 1985. Cattle slaughter amounted to 272,900 head in 1986, up 11 percent from 1985. Calves slaughtered totaled 4,500 head in 1986, a drop of 59 percent from the previous year. There were 1,100 head of sheep and lambs slaughtered in 1986, up 22 percent from 1985.

## CATTLE AND CALVES, NUMBER ON FARMS AND VALUE, JANUARY 1: GEORGIA, 1981-1987

| Year | All Cattle and Calves | Value | |
|---|---|---|---|
| | | Average per Head | Total |
| | 1,000 Head | Dollars | 1,000 Dollars |
| 1981 | 1,900 | 370 | 703,000 |
| 1982 | 1,940 | 330 | 640,200 |

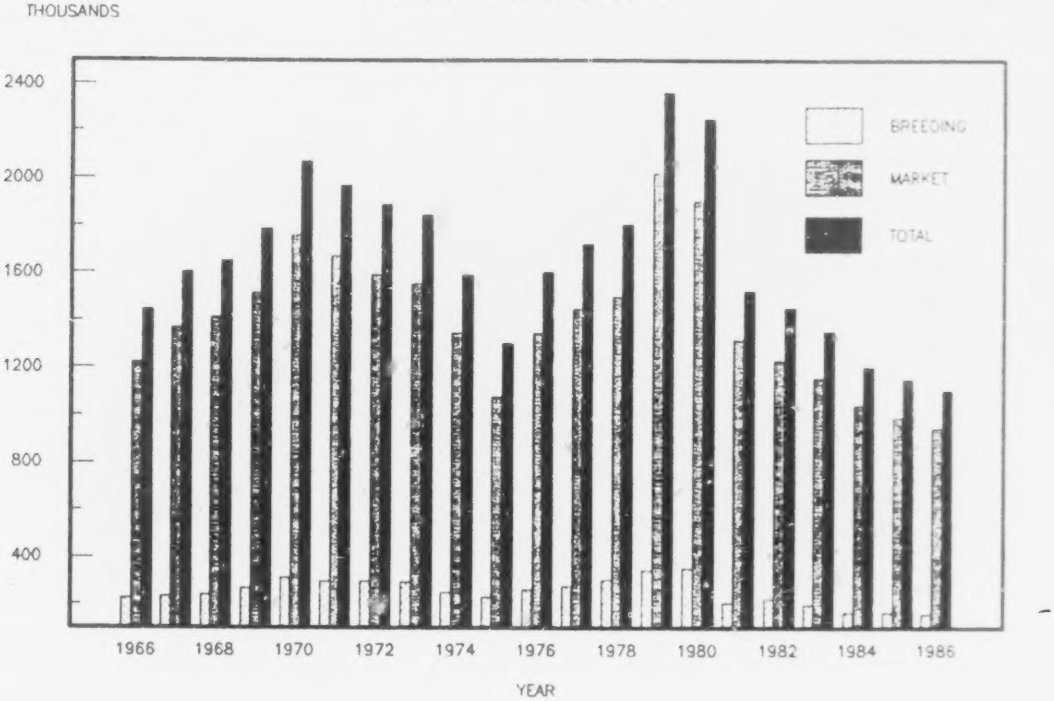
## GEORGIA HOGS
## DECEMBER 1, 1966-86



# FARM INCOME, PRICES AND EXPENSES

## 1986 HIGHLIGHTS

Georgia farmers' gross farm income for 1986 fell 3 percent to $3.63 billion. This is the third year gross farm income has declined. Farm production expenses decreased 10 percent in 1986 to $2.54 billion. Net farm income, at $1,095.1 million was up 20 percent from 1985 and ranks as the second highest of record.

All major income categories in 1986 except livestock, poultry and government payments were below 1985. The largest drop dollarwise occurred in farm marketings which fell $71 million or 2 percent. Value of farm inventories declined $90 million during 1986 compared to $40.3 million in 1985.

## 1986 CASH RECEIPTS

Georgia farm products sold during 1986 including government payments and farm forest products, generated cash receipts of $3.4 billion, down 1 percent from 1985. Crops accounted for 38.8 percent of the total, down from 45.0 percent in 1985. Poultry accounted for 37.1 percent of the total and livestock and livestock products sales accounted for 18.2 percent.

Crop cash receipts totaled $1.3 billion in 1986, down 15 percent from 1985. Peanut receipts valued at $490 million, accounted for 14.3 percent of the total cash receipts. Soybean receipts, at $94 million, fell 50 percent from 1985. Tobacco cash receipts, at $108 million were down 23 percent and corn cash receipts declined 50 percent.

Poultry cash receipts in 1986 totaled $1.36 billion, up 16 percent from 1985. Broiler sales at $952 million or 27.9 percent of the total again ranked as the leading gross sales enterprise in Georgia. Eggs ranked in third place among all commodities with cash receipts of $263 million, up 12 percent from 1985.

Livestock cash receipts in 1986 totaled $620 million, down 3 percent from 1985. Cattle and calves receipts valued at $215 million, fell 4 percent from 1985. Hog receipts at $195 million, dipped slightly. Dairy product sales were down 4 percent in 1986.

Farm forest products and government payments at $86 and $116 million respectively, accounted for 5.9 percent of the total.

## PRICES RECEIVED BY GEORGIA FARMERS

Prices received by Georgia farmers were mixed for 1986 in comparison to the previous year. Prices for most field crops were below a year earlier. Corn sales for the 1986 marketing year averaged $1.90 per bushel, down 49 cents from 1985 and the lowest price since 1972. Soybeans were down 7 cents per bushel to $4.75 per bushel. Peanuts for the 1986 marketing year averaged 30.0 cents per pound, up 5.4 cents per pound and the highest on record. Tobacco at $1.581 was down $.130 per pound for the lowest price since 1981. The average price received for cotton was down 4 percent but cottonseed was up 58 percent from the previous year. Pecans, at 81.1 cents per pound, were 12.7 cents higher than 1985 and the highest of record.

Broiler price, at 32.5 cents per pound, was 4.5 cents higher than in 1985 and the highest of record. The all egg price averaged 73.2 cents per dozen, 7.2 cents above a year earlier. The income in the all egg price was largely due to a 16 cent increase in the price of hatching eggs. Season average milk price dropped 20 cents per cwt. from 1985 to $13.90. Milk cows averaged $35 per head higher at $835. Hog prices were up to $50.50 per cwt. on average for the year, $5.80 above the previous year. Barrows and gilts were up $5.90 to $51 per cwt. The average price for beef cattle, at $40.60 per cwt., was 7 percent below 1985. Steer and heifer prices dropped $2.40 from 1985 to $48.60 per cwt. Calf prices fell 3 percent to $54.50 per cwt.

## 1986 FARM PRODUCTION EXPENDITURES

Farm production expenditures totaled $2.5 billion for Georgia in 1986, 10 percent below the $2.8 billion of 1985. The 1986 farm production expenses were the lowest since the record high of $3.27 billion in 1981. Of the 16 categories, expenditures increased in 4 but declined in 12. Items that increased included livestock purchases at $149.9 million, up 4 percent; cash wages at $158.1 million, up 2 percent; repair and maintenance at $113.8 million, up 2 percent and business taxes at $70.1 million, up 2 percent from a year ago.

Feed was the largest expense item for Georgia farmers at $561.7 million and accounted for 22.1 percent of the total. In 1985 feed cost totals were $638.0 million and represented 22.6 percent of the total.

Outlays for fertilizer, lime, fuel and oil showed the largest decreases, down 27 percent from 1985. Net rent to nonoperators at $75.9 million was down 25 percent from 1985. Pesticide expenses at $112.8 million were down 10 percent from 1985. Interest expense at $383.6 million was down 8 percent from 1985. Seeds and electricity were down 11 and 1 percent respectively from 1985.

## PRICES PAID BY FARMERS

Major changes occurred in the prices paid series during 1986. A shift was made from monthly surveys to quarterly, semi-annual or annual surveys. Prices paid and indexes are now computed and published in January, April, July and October. Also, state level estimates were discontinued in 1986. Regional and U.S. level prices are published for feed, fertilizer and fuel. Only U.S. level prices are published for all other prices paid series.

The U.S. 1986 average Index of Prices Paid for Commodities and Services, Interest, Taxes and Wage Rates was 159 (1977=100), down 4 points (2.5 percent) from 1985. The only commodity groups in the index to increase were automobiles and trucks, and other machinery and implements.

# GENERAL

## WEATHER AND CROP SUMMARY, 1986

January began with the final days of harvesting the quality damaged 1985 soybean crop. Lows dipped into the single digits in north Georgia and the teens in south Georgia during January. The onion crop suffered some damage. In February, lows fell to the teens in north Georgia and to the 20's in south Georgia. Early peach blooms were hurt by the freeze. By the middle of the month, all of 1985's remaining row crops were completely harvested or abandoned. March enabled Georgia farmers to begin spring planting. Rains delayed plantings in the middle of the month. Cold temperatures around the 22nd of the month damaged peach blooms, vegetables, and corn. April brought very little rainfall and began one of the worst droughts in Georgia's history. Crop plantings could not continue by month's end due to the dry conditions. Another cold snap at the end of the month damaged fruit and vegetable crops again. The first half of May brought a continuation of the dry weather. Pastures became brown in color from the lack of precipitation. Supplemental feeding of hay and feed to livestock began. A little relief from 90 degree temperatures came late in the month with some rainfall. Temperatures of over 90 degrees occurred over south Georgia for almost the entire month of June. Some rainfall enabled most row crop plantings to be completed in south Georgia. Hay was still being fed to livestock. From July to the last week in August, Georgia agriculture labored through a severe drought period. Hay was shipped in from other states to help out Georgia's cattlemen, much of it donated from farmers outside the southeast. Many cattle had to be sold prematurely during the dry period. Some rain finally came during the last week of August. September and October brought spotty showers. Hay harvesting was possible during September and early October. Hay produciton for the year though was well below normal. Pastures improved. Row crop harvesting was delayed and stayed behind schedule. Farmers tried to delay harvest in anticipation of late rains helping some crops. November yielded wet weather and warm temperatures. Quality damage was inflicted on the crops that were still in the fields. December again brought some more rains and some warm temperatures. More quality damage occurred on unharvested crops.

### JANUARY

January had extended dry periods and a wide range of temperatures. The State averaged only 2.26 inches of precipitation for the month, which was 2.39 inches below normal. Rain fell on only 3 to 5 days over the north and 6 to 10 days over the central and south. Snow fell as far south as St. Simons Island but the only accumulations were under one inch in the north. The State's average temperature for January was 44.3 degrees, only 1.21 degrees below normal. However, daily temperatures had a much wider variation. Extreme high temperatures were near 70 in the north to the low and mid 70's in the central and south. Extreme lows were in the single digits over the northern half of the State with some negative readings. Extreme lows January 26 and 27 over the central and south were well into the teens all the way to the Florida border. The cold strike did some damage to onions in southeast Georgia. Soybean and cotton harvest was active during January as weather permitted. Harvesting of cotton and soybeans was nearing completion by the end of the month for these quality damaged crops. Seeding of small grains was also active. Soil moisture was mostly adequate to surplus at the end of the month. Tobacco plants were in good condition at the months' end. Livestock and poultry came through the month in mostly good condition. Chill hours for peaches was above minimum levels for most areas.

### FEBRUARY

February's average precipitation was near normal at 4.29 inches, only .24 inches below normal. Wide fluctuations occurred in the locations where the precipitation fell, though very heavy rains fell across south Georgia the first two weeks of the month. Rainfall totals for the month exceeded four inches south of a line from Blakely to near Burtons Ferry in Screven county. Local totals near ten inches fell in this area with twelve inches reported at the Tifton Experiment Station. Total rainfall for the month was 1 to 3 inches in the north, 3 to 4 inches in the central, and 5 to 13 inches over the south. These totals were 1 to 2 inches short of the seasonal normal in the north, near one inch short in the central, and 3 to 9 inches above normal in the south. The State's average temperature for February was 52.5 degrees, 4.4 degrees above normal. There was a wide range of daily temperatures. Highs into the mid 70's occurred over the north with around 80 degree readings in the central and south. Lows were in the teens in the north, low and mid 20's central, and mid and upper 20's south. Overnight lows were below 32 degrees on 11 to 14 days in the mountains and 6 to 8 days elsewhere in the north. Below 32 degree temperatures occurred on 4 to 8 days in the central and south. The heavy rains caused extended delays in land preparation, soil fumigation, and other field work. The first few days of February were dry, enabling farmers to virtually complete harvest of the 1985 cotton, pecan, and soybean crops. There was some concern over cold injury to early peach varieties in central Georgia from the cold snap of the 15th and 16th. At the end of the month soil moisture was short in the north and central and adequate to surplus elsewhere. A few early peach varieties were blooming as far north as central Georgia by the end of February. Tobacco plants were in good condition throughout the month.

### MARCH

Georgia received significant rains at the end of the second week of March. Rain totals of one to three inches were common with totals over four inches mainly over west central Georgia. The rain caused delays in field work but brought much needed rain. The State's average precipitation for March was 3.31 inches, 2.26 inches below normal. Rain fell on only 4 to 6 days during the month and most of that was during the second and third weeks. The average temperature for March was 55.7 degrees, 0.6 degrees above normal. The highest temperatures during the month were around 80 north to mid and upper 80's central and south. Most of the lowest temperatures were during the first part of the month and ranged from the teens in the mountains to low and mid 20's in the central and south with around 30 near the southeast coast. However, a cold snap around the 21st-23rd brought lows into the upper teens and low 20's in the mountains, mid and upper 20's in the central, and low and mid 30's in the south. This period of below freezing temperatures and frost caused some damage to the State's peach crop. Bloom damage was reported from most areas. The low temperatures also damaged peppers, tobacco and tomatoes. Early planted watermelons also had some freeze damage. The most damage occurred in central Georgia where some of the early melons were killed. A few fields of corn had to be replanted due to the freeze. Some Hessian fly problems were reported showing up in the State's wheat crop. Overall, March enabled farmers to finish up land preparation and get off to a fast start planting early spring crops. By the end of the month soil moisture supplies were rated adequate. Corn planting progress was ahead of average and equal to 1985. Tobacco transplanting was ahead of both last year and average.

## APRIL

Dry weather was by far the major problem for Georgia agriculture during April. By the end of April, most stations had recordedd over 40 days since the last quarter inch rain. Rain totals for April were under an inch except in the extreme north where some one inch amounts were recorded. This was three to four inches below normal. The State's average precipitation was only 0.68 inches or 3.52 inches below normal. At the end of April, the rainfall deficit since January 1 exceeded ten inches in many areas. Temperatures showed a wide variation during April. After record low temperatures at mid month (April 22 and 23), readings reached record highs late in the month. Nearly all locations recorded highs in the 90's and lows in the 30's. Extremes ranged from 98 at Jesup to 24 at Blairsville. Temperatures averaged out to be near normal at most locations and a statewide average of 63.5 degrees. This was 0.2 degrees below normal. Soils were cooler than normal for the first half of the month and then warmed to above normal readings by late in the month. Unusually high pan evaporation rates exceeding a third of an inch were recorded the last week of April.

At the beginning of April, dry soils were delaying land preparation and planting in most areas. Irrigation facilities were used extensively where available on corn to provide moisture for seed germination and keeping the small plants alive. Stand problems in corn due to the dry soils were common. Hessian Fly problems in the State's wheat crop continued to appear. During the second week of April, brisk winds caused some sand blasting of emerged crops in south Georgia. By the end of the month planting of cotton and watermelons was at a virtual standstill due to the dry soils. The 22nd and 23rd of April brought frost and record cold to much of the State which damaged fruit and vegetable crops. At the end of the month, planting progress for cotton, peanuts, and soybeans was far behind normal as farmers without irrigation decided against risking seeds in dry soils. A real crisis was developing for many cattle producers. Pasture feed was rapidly decreasing and the spring hay crop was in very poor condition.

## MAY

Much needed rain finally came to portions of Georgia in May. However, most of the rain fell the last half of the month. The heaviest rains were over north and central Georgia where totals of two to three inches were common. A few areas of north Georgia received over five inches of rain. However, south Georgia missed most of the rain with totals generally one inch or less. For the month, rainfall averaged 2.69 inches, 1.65 inches below normal. Yearly rainfall totals for the State were only 50 percent of normal at the end of May. Temperatures averaged 71.6 degrees in May, 0.9 degrees above normal. Lowest temperatures during the month were mostly in the 40's. Temperatures dipped to near freezing over the colder mountain areas on Sunday morning, May 4th. Hot weather prevailed over the central and south the last of the month with maximum temperatures reaching well into the 90's. Several stations across south Georgia reported highs in the upper 90's over the Memorial holiday weekend.

Most thought it wouldn't get any worse than April but they were wrong. Soil moisture ratings fell to an all time low of 90 percent very short and 10 percent short the first part of the month. Crop condition ratings fell as did condition ratings for livestock, especially cattle. Supplemental feeding of cattle was wide spread and hay supplies began running short. Planting came to a halt in many areas where irrigation wasn't available. Harvest of the State's drought reduced wheat crop got an early start and progressed at a faster than average pace. Peach harvest began in early May about on schedule and ran ahead of average. Scattered showers the last half of May enabled many farmers to plant cotton, peanuts, soybeans, and grain sorghum. However, planting progress at the end of the month was still behind average. At the end of the month, soil moisture supplies were rated a much improved 22 percent very short, 41 percent short, 35 percent adequate and 2 percent surplus. Pastures had shown some improvement but were providing only a small part of the normal roughage supply. Hay crops were showing little improvement at the end of the month.

## JUNE

Below normal rainfall continued across most of Georgia during the month of June. The State averaged 2.56 inches of precipitation, 1.76 inches below normal. However, there were a few areas with above normal rainfall. The heaviest rainfall totals were 10.44 inches at Homerville, 7.36 inches at Alma, and 6.51 inches at Valdosta. It was a hot June with temperatures averaging two to four degrees above normal. The State average was 79.6 degrees, 3.0 degrees above normal. Temperatures exceeded 90 degrees on only two days in the higher northeast mountains but up to 28 days over the south. Maximum temperatures climbed to around 100 degrees over the central and south late in the month. Lowest temperatures during the month were mostly in the 60's with some 50's in the mountains.

Early June brought the best soil moisture ratings since early spring. Crop condition ratings improved some but for early planted dryland corn it was already too late. Pastures continued to provide limited feed and supplemental feeding continued from ever diminishing supplies.

Tobacco harvest got underway at mid-month and ran behind last year and average the rest of the month. Harvest progress of the freeze and drought damaged peach crop ran well ahead of average all month. The moderately improved soil moisture ratings of mid-June were merely a tease as the last week of June brought the return of drier conditions and more crop stress. Planting of a very late cotton and peanut crop was virtually completed by the third week. Soybean seedings were approaching average at the end of the month. Crop development was well behind average and 1985 for all row crops at the end of the month.

## JULY

Unfortunately July continued Georgia's serious drought. July produced below normal rainfall and above normal temperatures. Only Augusta and Homerville had above normal rainfall. A majority of Augusta's rain fell during a one hour period. Most rain totals were one to three inches or about half of the normal amount. A few areas received less than one-third of the normal rain. The State averaged 2.79 inches of precipitation, 2.55 inches below normal for the month. Temperatures in July averaged three to six degrees above normal. The average for the State was 83.5 degrees, or 4.1 degrees above normal. Blairsville and Clayton were the only areas without a high of 100 degrees during the month. Temperatures exceeded 90 degrees each day of the month over most of the central and south. Temperatures of 100 degrees or above occurred on 10 to 15 days over portions of central Georgia. Several areas had a high of 106 degrees during the month. The prolonged lack of rainfall and high temperatures caused pasture feed to be exhausted and hay supplies to shrink to critically low levels. Some cattlemen were forced to prematurely sell their cattle due to lack of feed. Emergency hay shipments from out-of-state sources arrived just in time to save many herds from liquidation. Georgia's row crops suffered further yield reductions due to the drought. Mid-July saw soil moisture ratings at 78 percent very short and 22 percent short for the lowest ratings since early May. There were reports from many areas of the State of streams and wells drying up. The month ended with crop condition ratings the lowest of the year. Soil moisture supplies at 70 percent very short, 25 percent short and 5 percent adequate was only slightly improved from the low point of the summer. By the end of July, cumulative rainfall totals for the preceding 10 months were more than 30 inches below normal.

## AUGUST

Beneficial rains finally came to Georgia about mid-month and continued through the rest of August. Most areas ended the month with above normal rainfall. Monthly totals ranged from 1.99 inches at Columbus to 13.53 inches at Savannah. East Georgia had the most rain with totals of 6.87 inches and higher. Most central and south Georgia areas had 3 to 5 inches of rain with 6 to 9 inches falling in extreme south central Georgia. The annual rainfall for the State remained at a deficit of 10 to 20 inches below normal in most areas. The State averaged 6.30 inches of precipitation in August, 1.87 inches above normal for the month. The month began with 100 degree temperatures and ended with highs only in the 60's. Maximum temperatures reached 100 and higher

early in the month across the southern two-thirds of Georgia. A late August cold front brought temperatures in the 50's nearly statewide. The State's average temperature for August was 78.6 degrees, 0.4 degrees below normal.

The beginning of the month added to the drought with soil moisture supplies showing very slight improvement. Farmers were busy locating hay supplies. Hay was still being shipped in from out-of-state. Cattle continued to be sold prematurely. Poultry losses mounted due to the drought and extreme temperatures. About mid-month, rains finally came to much of the State, helping to improve pastures and enabled hay fields to start growing again. Armyworm populations increased in the hay and pasture lands which caused some concern. Insects also caused the usual problems in peanuts, soybeans, cotton, and grain sorghum. The rains came much too late for the State's corn crop but was a salvation for much of the cotton and peanut crops. Some soybean fields were already abandoned by the time the rains came. Soil moisture at the end of August was the best since mid-June but 59 percent of the counties still reported short to very short soil moisture supplies.

## SEPTEMBER

Most of Georgia received below normal rainfall in September. Rain totals of two to five inches were common over north and west central Georgia with over eight inches reported at Hawkinsville. Rain totals over east and south Georgia were mostly under two inches with some areas receiving under one inch of rain. Georgia averaged 2.94 inches of precipitation in September, 1.21 inches below normal. Temperatures during the month averaged one to three degrees above normal in most areas. Temperatures exceeded 90 degrees only one to five days over the north but ten to twenty days elsewhere. The hottest temperatures occurred late in the month when highs ranged from the mid and upper 80's in the mountains to the mid and upper 90's in the central and south. Coolest temperatures during the month ranged from the 50's in the north and 60's in the south with some 40's in the mountains. The State's average temperature for September was 75.7 degrees, 1.4 degrees above normal.

Soil moisture improved during the first week of September. Row crops which were planted late due to the year's early dry weather benefited from these showers. Hay harvesting was hampered by showers. Armyworm populations threatened hay land and row crops in the humid and cool weather conditions. Early planted row crops such as dryland corn did not benefit from the rains. By the end of the month, dry conditions had returned.

Optimism was high for a good fall growing and harvest season as the first two weeks of September followed the pattern of the last half of August. Rainfall was widespread and temperatures were near seasonal normals. The second week of September saw the highest soil moisture ratings of the year. The rains and damp weather did slow hay and corn harvest but benefited crops such as cotton, soybeans and peanuts. Pastures were making some recovery and farmers were busy trying to re-establish stands of grass and planting temporary fall and winter grasses. The last part of the month was ideal for haying as much warmer and drier conditions returned. By the end of the month, soil moisture was again at the low levels of mid-August. Armyworms were reported in soybeans, pastures and hay fields. Harvest progress for corn was over 90 percent and ahead of last year and average. Peanut harvest was off to a very slow start, far behind the fast pace of 1985 when over 75 percent of the crop was harvested by the end of September.

## OCTOBER

Rain fell on six to nine days during the month. Totals were above normal except in the southeast third of the State. Totals for the month were between three and eight inches in the north, two to three inches in the central and southwest, and under two inches in the southeast. These totals were some two to five inches above normal in the north, near one-half inch above normal in the central and southwest, and near one inch below normal in the southeast. The State averaged 4.10 inches of precipitation, 1.50 inches above normal for the month. The rains came in mid-October. In early October the warmest afternoon highs were in the 90's. Lows reached the 30's and 40's later in the month. Frost was reported in the Dawson-Plains-Americus area. The State averaged 65.4 degrees for the month, 1.6 degrees above normal.

Early October's summertime like temperatures provide excellent conditions for baling hay, harvesting row crops and seeding small grains. A light frost over part of the peanut belt gave growers with late peanuts a scare but little damage occurred. Peanut harvest at the beginning of the month was well behind normal progress and continued that way through the month. Dry weather accompanied the high temperatures and soil moisture again fell to the low summertime levels. Cotton harvest got off to a normal start and was about equal to average progress at the end of the month but behind 1985's pace. Soybean harvest progress was about equal to average all month but about a week behind the fast 1985 pace. Pastures had improved to a fair condition by the end of the month. Farmers were busy after the rains, seeding small grains and reseeding pastures damaged by the drought. Pecan harvest started at mid-month and progress was about equal to normal. Light showers, drizzle and cloudy weather slowed harvest of row crops in south Georgia the last part of the month.

## NOVEMBER

November was a wet month across Georgia. Rain fell on sixteen to eighteen days in the north and during seven to fifteen days in the central and south. Rainfall totals over the State were still four to sixteen inches below normal since January 1st though. The State average rainfall for November was 6.26 inches, 3.28 inches above normal. Temperatures averaged three to six degrees above normal over the north and seven to nine inches above normal in the central and south. The extremes ranged from highs in the low 80's in the north to upper 80's in the south with the coldest lows ranging from the teens in the mountains to upper 30's in the south. The November average State temperature was 60.4 degrees, 6.2 degrees above normal. By monthe end, 85 percent of the State's cotton was harvested and 70 percent of the State's soybeans were harvested. Wet weather the last half of November restricted harvest progress. The remaining cotton and soybeans standing for harvest suffered some quality loss due to the wet conditions and above normal temperatures. Other crops were virtually harvested by the end of November, but a few peanuts remained in the fields.

## DECEMBER

Temperatures in December averaged near normal except three to five degrees above normal over southeast Georgia. Coldest temperatures during the month ranged from the mid teens over the higher mountain areas to the mid 30's over the extreme southeast counties. Warmest temperatures ranged from the mid 60's over the extreme north to near 80 degrees over the extreme south. Most of Georgia received three to five inches of rain in December which was near normal. However, local rain totals of five to eight inches occurred over the northeast mountains and across south Georgia. Rain was reported on ten to fifteen days across most of the State. Average precipitation for December was 4.57 inches, 0.38 inches above normal. The State's average temperature was 48.1 degrees for December, 0.6 degrees above normal.

Harvest progress of soybeans and cotton slowed to a crawl during the first half of December and progress was only slightly faster the rest of the month. Cotton and soybeans still awaiting harvest suffered further quality loss due to the frequent rains and warm, damp weather. Pecan harvest was very active in December but quality loss also became a factor. Pecan harvest was active during the month but was slightly behind average progress. Small grain seeding progress at mid-month was near normal. Wheat that had emerged was in fair to mostly good condition.

| 1986 | 49 | 35 | 9.0 | 1.7 | 13,300 | 271 | 822 |
| 1987 | 48 | | | | 13,000 | 271 | 846 |

1/ Prior to 1975, defined as places of 10 acres or more that had annual sales of agricultural products of $50 or more and places of less than 10 acres that had annual sales of $250 or more. Beginning with 1975, places with annual sales of agricultural products of $1,000. Beginning with 1975, a farm is a place as of June 1, that sells or could sell $1,000 of agricultural products during the year. 2/ Not available prior to 1965. 3/ As of March 1, 1962-1975; changing to February 1, 1976-1981; April 1, 1982-1985, February 1, 1986. Average value includes land and buildings.

## FARM REAL ESTATE: VALUES, CASH RENT, GEORGIA, 1976-1987

---

1/ Beginning in 1985, Farm Labor data published regionally. The Southeast region includes GA, AL, and SC. 2/ Estimates made annually in 1982 and 1983; current program is for estimates in Apr., July, and October. 3/ Excludes agricultural service workers. 4/ Includes only family members who worked 15 hours or more during survey week without receiving cash wages. 5/ Classification includes bookkeepers, buyers, etc. 6/ Includes wages based on salary or commission paid by day, week, etc. 7/ Insufficient data, included in all hired wage rates.

## ESTIMATES ISSUED BY GEORGIA AGRICULTURAL STATISTICS

Current estimates of many data items included in this publication are available from the Georgia Agricultural Statistics Office, at various times throughout the year. The table below indicates the months data are available. Current data may be obtained by calling the Georgia Agricultural Statistics Office or interested persons may be added to one or more of our five mailing lists. The five separate mailing lists are: (1) Weekly Weather and Crops, (2) Weekly Broiler Report, (3) Georgia Agricultural Facts, (4) Georgia Poultry Facts and (5) Georgia Farm Report, a semi-monthly publication containing various crop, livestock, price, and other farm data. The annual charge for these publications is: Weekly Weather and Crops, $12; Weekly Broiler Report, $15; Georgia Agricultural Facts, $5; Georgia Poultry Facts, $5; and Georgia Farm Report, $10. Reports are available free of charge to farmers and agribusiness firms who provide the basic data on which reports are based. Within availability constraints, a copy of the Georgia Agricultural Facts and Poultry Facts is available to Georgia residents without charge. An order form may be obtained by calling (404-546-2236) or writing the Georgia Agricultural Statistics Office.
